Portfolio: nawaazamien.github.io/developer-portfolio | Code sample: github.com/nawaazamien/saas-foundation

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of professional experience in full-stack web development, currently Software Engineer 1 after progressing from intern. Works in agile teams across JavaScript, PHP, SQL and PostgreSQL, and owns features from concept to implementation. Independent products built with React, TypeScript, Supabase and PostgreSQL cover multi-tenant SaaS, Row Level Security, automated testing and CI/CD, including a public code sample, SaaS Foundation.

PROFESSIONAL EXPERIENCE

Achievement Awards Group, Cape Town

August 2022 – Present

Software Engineer 1 (current) | Associate Software Engineer (from March 2024) | Software Engineer Intern (Aug 2022 – Feb 2024)

- Own features and systems from concept through implementation across the stack.
- Build and maintain responsive, mobile-first web applications: frontend in HTML, CSS and JavaScript, backend in PHP and SQL.
- Improve frontend performance and ensure cross-browser compatibility.
- Work in agile sprints, write unit tests and resolve complex bugs.
- Collaborate using Git, Bitbucket, Jira and Docker.
- As an intern: maintained internal web applications, refactored legacy components for performance and readability, and worked with APIs and PostgreSQL and MySQL databases in Agile and Scrum teams.

SELECTED PROJECTS

Independent product development under Anti Social Studios (self-directed, not employment).

SaaS Foundation

github.com/nawaazamien/saas-foundation | Live demo: nawaazamien.github.io/saas-foundation

React, TypeScript, PostgreSQL, Supabase, Row Level Security, GitHub Actions

- Built a public reference implementation of multi-tenant SaaS with organisation switching, role-based access and database-enforced tenant isolation.
- Implemented typed demo and Supabase adapters behind a shared backend contract.
- Validated Row Level Security and role boundaries with 28 PostgreSQL policy tests, alongside unit, contract and UI tests.
- Added CI-gated GitHub Pages deployment and architecture and security documentation, including what has not been verified.

Anti Social Finance

Case study (source is private)

React, TypeScript, Vite, Supabase, PostgreSQL

- Designed and built a multi-tenant accounting platform: bank-statement import, chart of accounts, journals with posting and reversals, general ledger, and Profit & Loss and Balance Sheet reporting.
- Enforced tenant isolation and ledger integrity in the database with Row Level Security, triggers and functions, and period close controls.
- Handled concurrency between posting and period close with row and advisory locks and uniqueness constraints.
- Tested across Vitest, a pgTAP database suite and race-condition checks.

Warmup

Case study (source is private)

React, TypeScript, Vite, Dexie (IndexedDB), PWA

- Built a local-first padel tournament manager that runs entirely on the device, with a live scoring runner and standings.
- Implemented a seeded, deterministic schedule generator with ordered fairness rules, validated with large generated regression suites.
- Derived standings from stored results and kept scheduling, standings and rating as pure, tested libraries.

SKILLS

Languages: JavaScript, TypeScript, PHP, SQL, Python, HTML, CSS

Frontend: React, Vite, responsive design, Vitest, Testing Library

Backend & Data: PostgreSQL, Supabase, Row Level Security, MySQL, Oracle SQL, REST APIs

Engineering: Git, Bitbucket, GitHub Actions, CI/CD, Jira, Docker, Agile and Scrum, automated testing

Tools: FFmpeg, yt-dlp, Godot (GDScript)

EDUCATION

Postgraduate Diploma, ICT (Applications Development), Cape Peninsula University of Technology January 2025 – Present

Advanced Diploma, ICT (Applications Development), Cape Peninsula University of Technology 2023

Diploma, ICT (Applications Development), Cape Peninsula University of Technology 2020 – 2022

CERTIFICATION

AWS Certified Cloud Practitioner, Amazon Web Services July 2024
